Overview

FORCAM provides companies with all the information they need to control and optimize their production. The modular IIoT solution FORCAM FORCE MES FLEX is as flexible as the needs of customers. With a variety of production apps, FORCAM helps companies to make their processes more transparent and improve their workflows. In this way, companies create the basis for optimization measures and sustainable success, thereby ensuring their competitiveness.

FORCAM is always endeavored to optimize the solution FORCAM FORCE MES FLEX further, to enrich it with functions, offering customers consistent growth and greatest possible use. For this purpose, several releases are published throughout the year.

This document lists functions that have been added or changed during the **5.12.20** release. It serves as an overview of the most important features to use FORCAM FORCE MES FLEX in the best possible way.

Detailed descriptions of the individual functions can be found in the respective product documentation.

Productivity

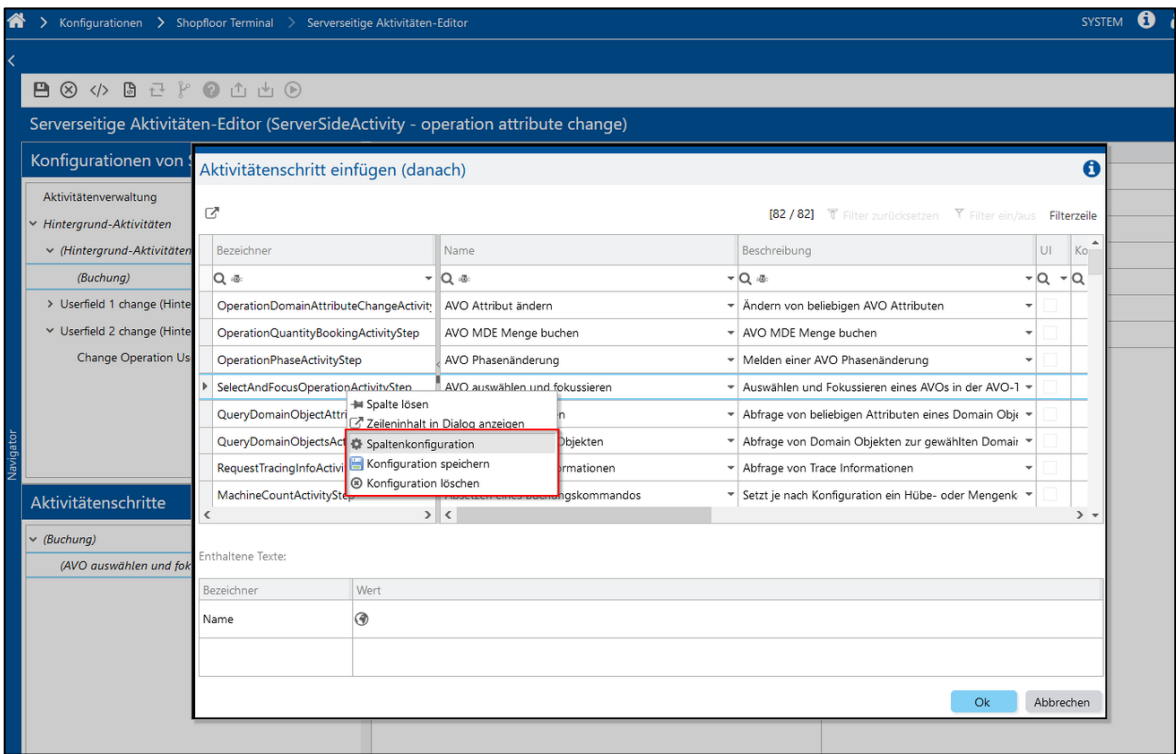

ActivityStepChooser Improvement

Affected module	Affected area	Status
Workbench	SFT	Changed

SFT - SFT Configuration ActivityStepChooser

Increased sizing of first three columns with most relevant information.

- ❶ User individual configuration regarding columns, column size & sorting etc. used by ActivityStepChooser is available via context menu (see screenshot below).

Additional Configuration

There are several other configurations for the activity step chooser which shows up on right click in the table.

Add Activity Step (First) i

[158 / 158] Clear filter Suspend Filter Filter Row

Identifier	Name
RequestTracingInfoActivityStep	Access Trace Information in a Generic Way
GrabFocusActivityStep	Active traction of the input focus
TracingEditAssemblyActivityStepUI	Assembly plan for rework
TracingOperationQuantityBookingActivityStep	Booking of Anonymous and Indentifiable Single Piece
OperationQuantityBookingActivityStep	Book temporary machine quantity to operation
TracingInspectionPlanActivityStep	Capture assembly plan
CarrierQuantityReachedTriggerActivityStep	Carrier Check
DomainObjectAttributeChangeActivityStep	Change of a domain attribute

-  Pin Column
-  Show row data in dialog
-  Column Configuration
-  Save Configuration
-  Delete configuration

- **Pin Column** - the selected column will be pinned to left panel.
- **Unpin Column** - the column(s) will be unpinned from left panel.

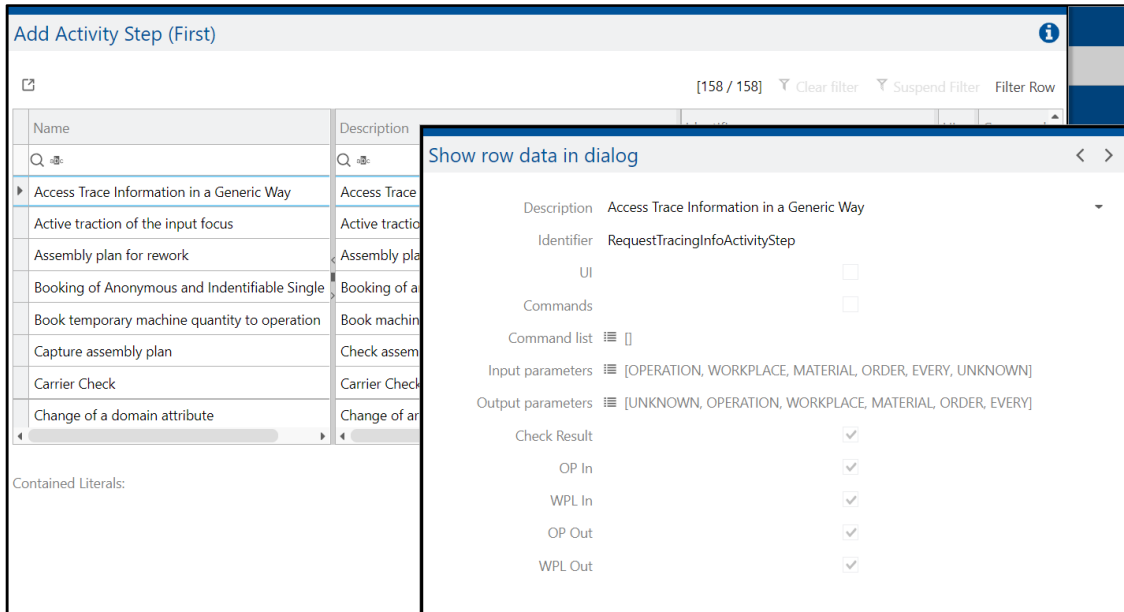

Add Activity Step (First) i

[158 / 158] Clear filter Suspend Filter Filter Row

Name	Identifier	Description
Access Trace Information in a Generic Way	RequestTracingInfoActivityStep	Access Trace Information in a Generic Way
Active traction of the input focus	GrabFocusActivityStep	Active traction of the input focus
Assembly plan for rework	TracingEditAssemblyActivityStepUI	Assembly plan for rework
Booking of Anonymous and Indentifiable Single Piece	TracingOperationQuantityBookingActivityStep	Booking of Anonymous and Indentifiable Single Piece
Book temporary machine quantity to operation	OperationQuantityBookingActivityStep	Book machine recorded quantity on operation
Capture assembly plan	TracingInspectionPlanActivityStep	Check assembly plan for master pieces/components
Carrier Check	CarrierQuantityReachedTriggerActivityStep	Carrier Check
Change of a domain attribute	DomainObjectAttributeChangeActivityStep	Change of arbitrary domain attributes

-  Unpin Column
-  Show row data in dialog
-  Column Configuration
-  Save Configuration
-  Delete configuration

- **Show row data in dialog** – This will display the details for the selected activity in dialog.

The screenshot shows the 'Add Activity Step (First)' dialog with a table of activity steps. The 'Access Trace Information in a Generic Way' step is selected. A 'Show row data in dialog' sub-dialog is open, displaying the configuration for this step.

Name	Description
Access Trace Information in a Generic Way	Access Trace
Active traction of the input focus	Active traction
Assembly plan for rework	Assembly plan
Booking of Anonymous and Identifiable Single	Booking of a
Book temporary machine quantity to operation	Book machine
Capture assembly plan	Check assem
Carrier Check	Carrier Check
Change of a domain attribute	Change of ar

Contained Literals:

Show row data in dialog

Description: Access Trace Information in a Generic Way

Identifier: RequestTracingInfoActivityStep

UI: ☐

Commands: ☐

Command list: []

Input parameters: [OPERATION, WORKPLACE, MATERIAL, ORDER, EVERY, UNKNOWN]

Output parameters: [UNKNOWN, OPERATION, WORKPLACE, MATERIAL, ORDER, EVERY]

Check Result: ☒

Reset, to Default Values Apply

- **Save Configuration** - If user want to resize the table column as per the requirement and save this configuration for future, the save configuration will save the configuration.
- **Delete Configuration** - User can restore the default configuration with delete configuration.

Duration Filter for Operating State Corrections

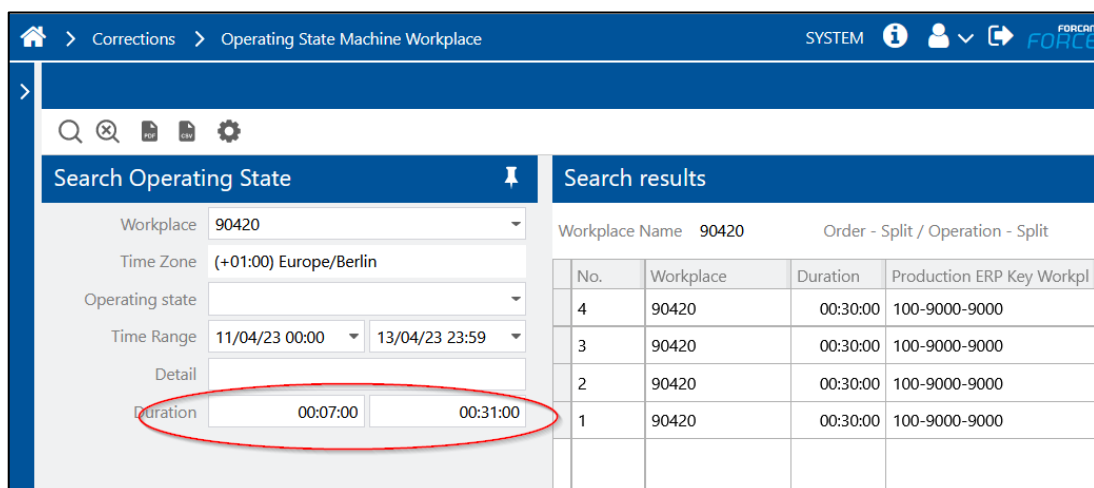

Affected module	Affected area	Status
Workbench	Corrections	New

Operation State Machine Workplace & Operating-State-Manual-Workplace

New **Duration** search filter available. Works as follow:

- only left value given => greater or equal to
- only right value given => lesser than
- both given => between
- none or equal values => no filter

Invalid input is marked as erroneous. The duration filter can be additionally chosen in the Search-Filter-Configuration.

Enhanced Ticket Creation: Flexible Selection and Data Validation

Affected module	Affected area	Status
FFWorker	SFT	Changed

SFT activity step: Dialog for the submission of a ticket (CreateTicketActivityStepUI)

In the step UI, several values are displayed to the user, both for workplace and operation. After this extension, the user can now select workplace, operation and/or material along with a title, a description, a root cause and the priority for the ticket to be created. Workplace, operation or material are now made non mandatory fields, however the data consistency is checked before creating the ticket. Data validation is done for valid pair of workplace/operation and operation/material.

The workplace/operation/material selector popup works like a single selection combobox where on clicking a row, the popup is closed and selected row is processed as respective value of workplace/operation/material field. If a value is present in field of workplace/operation/material, the selected row would be preselected in the combobox and on click of selected row implies the deselection of value and the respective workplace/operation/material field gets selected with empty value.

The combobox popup also have a search field to narrow down the popup entries. It works as regular string search. Sample screenshot of operation selector popup is given below.

CreateTicketActivityStepUI

Comment: Ticket comment

Detail: Ticket detail

Root cause: Search Operation

Priority: 1001000100/0/0010/0

State: 1001000101/0/0010/0

Workplace: 1001000102/0/0010/0

Date: 1001000103/0/0010/0

Operation: 1001000104/0/0010/0

Material No.: M-15223675 - AFTV-Vertikal-Kettenför

OK

DPB – Extension with Workplace Availability

Affected module	Affected area	Status
Workbench	Configuration	Changed

Master Data - Workplace hierarchy (ORG)

The availability factor is a workplace dependent attribute. It is configurable in the **ORG workplace hierarchy** and follows the usual rules of hierarchy attributes. If not, explicit set it defaults to 1.0, meaning 100% of availability.

The value is a fractional number and must be >0 (greater than 0). For example: an availability of 0.25 means the workplace does have an availability of only 25%. In contrast, an availability factor of 2 defines that availability is twice as high.

Attributes: Ravensburg (Plant 9000) - 9000

#	Attribute Name	Description	Value	Inherited	Overwriter	Will Be Inh	Read-Only
1	Language	Language	de-DE	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2	Time zone	Time zone	(+02:00) Europe/Berlin - Central Eu	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3	ERP Key	ERP Key	100-9000-9000	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4	Personnel ERP Key	Personnel ERP I	Selected (1), Available (0)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5	Overhead Cost ERP Key	Overhead Cost		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6	Cost Center	Cost Center		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7	Operation Overlap	Operation Over		<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8	Availability	100% availability.	5.22	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
		Availability of the workplace as a factor. Values > 0 and comma values are permissible. A factor of 1 corresponds to 100% availability.					
		OK Cancel					

Digital Planning Board

The consideration of the availability factor is a planning relevant configuration. It has to be enabled to get effective.

Edit Configuration

Identifier	Value
▼ Planning Mode	
Restricted Operation Areas	Selected (0), Available (3)
Operation elongation areas	Selected (3), Available (0)
Quantities for Remaining Time Calculation	Selected (2), Available (2)
Close Gap Automatically	<input type="checkbox"/>
Display Overlap Status	<input checked="" type="checkbox"/>
Check group capacity	<input type="checkbox"/>
Check operation sequence	<input type="checkbox"/>
Consider individual production time per unit	<input checked="" type="checkbox"/>
Consider availability (workplace)	<input checked="" type="checkbox"/>

Save
Apply
Cancel

Consideration within DPB

The availability is impacted accordingly with each planning action, if applicable. The following applies:

- The factor is considered only for the production time of an operation, not for the setup time.
- Selected operation elongation areas within the DPB cfg are not relevant, as the factor is only wp dependent.
- Calculation principle: $(\text{RemainingQty} * \text{TimePerUnit}) / \text{availability-factor}$.
- The availability factor never applies if an operation is assigned to a wp-group.
- The availability factor is also considered with creation of an operation split (source and split), if applicable.

Force Common

Tomcat Hardening 10.7 and 10.18

Affected module	Affected area	Status
Forcam FORCE	Apache Tomcat	Changed

Disable Session Facade Recycling in Tomcat

Tomcat supports the notion of session facade recycling. This means, a session-specific facade object can be retained for later reuse in separate sessions for performance reasons. With this change facades are not reused anymore by any Tomcat installed through Forcam FORCE.

Print Final web.xml During Tomcat Start

Tomcat supports configuring application settings both via web.xml and annotations. If annotations are in use, by default no output is provided in the Tomcat log highlighting the actual effective configuration used at runtime. With this change the effective configuration is printed to the Tomcat log to for forensic purposes.

 Results are written to the catalina.log file under tomcat/log.

Support for New MongoDB Version

Affected module	Affected area	Status
Forcam FORCE	MongoDB	Changed

As Mongo DB Version 4.2 is not supported any more. It is now upgraded to Mongo DB 5.0 version. More information in the Technical Release Notes 5.12.20.

FFSetup

Removal of org.hibernate.criteria API

Affected module	Affected area	Status
FFWorker	SFT	Changed

In preparation of the upgrade to Java 17 the deprecated org.hibernate.criteria API, which will be not supported with Java 17 anymore, has been removed. More information in the Technical Release Notes 5.12.20.
